Linear Outdoor Fireplaces
Stainless steel construction, an integrated LED lighting system, and a 55,000 Btu burner ensure that Empire’s 48-inch Outdoor Linear Fireplace will light up your patio party for any occasion. Or choose the 60-inch model with 65,000 Btu burner.

An exciting addition to the Carol Rose Coastal Collection of outdoor fireplaces, these all-new single sided and see-through models conceal a gas burner beneath a large bed of clear-frost crushed glass. While the flames dance atop the bed of glass, the lighting system illuminates the glass from beneath. A glass deflector shield helps protect the flame from wind. (Optional taller deflectors are available for fireplaces installed in windier locations.)

A tilt-up cover conceals all controls – including pushbutton ignition and flame control knob with Hi, Medium and Low – plus intuitive buttons to control the changing pattern and color of the LED lighting. The buttons let you select from seven LED colors – Deep Blue, Royal Violet, Cardinal Red, Sea Green, Forest Green, Tranquil Blue, and White – and vary the intensity. Two “program” settings cycle through the colors automatically – either quickly or gradually.
**Outdoor Linear Fireplace Specifications**

Outdoor Linear Fireplace includes two metal studs and noncombustible backer board. Additional materials may be required for installation.

Empire is committed to continuous product improvement; specifications are subject to change without notice. Dimensions in this brochure are approximate; read and follow the framing dimensions in the owners manual supplied with your Empire product. Flame size, shape, and color will vary from photos. Refer to your Owner’s Manual for complete installation and safety information.
**Fireplace Controls**

Outdoor Linear Fireplaces feature a manual, three-position gas valve and pushbutton ignition. The burner is concealed beneath a bed of crushed glass.

Each fireplace includes a flame sensor that shuts off gas to the system if the flame is extinguished. All are available in LP and Natural Gas.

**Outdoor Linear Fireplace Accessories**

Stainless steel Weather Doors install in seconds without tools to help protect your fireplace from the elements and provide a clean look when it’s not in use. See-through fireplaces need two doors. Outdoor Fireplaces are designed to allow rainwater to drain through onto the area beneath the unit. The optional Drain Tray lets you control this water and direct it (via plastic tubing) to an appropriate location – such as a gutter or garden.

The Linear fireplace requires eight square feet of Empire’s Clear Frost Decorative Crushed Glass (sold separately). The clear glass allows the LED system to shine through. Small amounts of other glass colors – in crushed, drops or droplets – may be added. See owner’s manual for details. For windy locations, replace the standard Wind Deflector with the optional Taller Wind Deflector.

**CAROL ROSE**

These special outdoor products are named for customer service manager Carol Rose Burtz, who has been with Empire for more than 55 years. As the first time we have named a product for an employee, this represents an appropriate honor recognizing Carol’s exceptional history with the company.
