<tr>
<td>If the information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.</td>
</tr>
</tbody>
</table>

— Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

— **WHAT TO DO IF YOU SMELL GAS**
  - Do not try to light any appliance.
  - Do not touch any electrical switch; do not use any phone in your building.
  - Leave the building immediately.
  - Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.

— Installation and service must be performed by a qualified installer, service agency or the gas supplier.

---

General Information: These instructions are intended as a general guide and do not supersede national or local codes in any way. Authorities having jurisdiction should be consulted before installation. Installation and provision for combustion and ventilation air must conform to the *National Fuel Gas Code, ANSI Z223.1, or CAN/CGA-B149.1, Natural Gas Installation Code.*

IMPORTANT SAFETY INFORMATION

Installer: Please leave these instructions with the owner for future reference.

For Installation In Solid Fuel Burning Fireplaces. Do not burn wood or solid fuels in a fireplace where a decorative gas log set is installed. This appliance is for installation only in a solid fuel burning fireplace, masonry fireplace or manufactured fireplace.

WARNING

Any modification to this gas log set or to controls can be dangerous. Improper installation or use of the gas log set can cause serious injury or death from fire, burns, explosion or carbon monoxide poisoning.

1. Please follow all local codes regarding installation, combustion and ventilation air or in the absence of local codes follow the National Fuel Gas Code ANSI Z223.1(U.S. installation), or CAN/CGA-B149, Installation Code (Canada installation) and with ANSI Z21.60 Decorative Vented Appliances for Solid Fuel Burning Fireplaces.

2. Proper installation, burner pan location and log placement is important to achieve optimum look and performance of your gas log set. The logs have been designed for easy location and placement on the grate and must be followed for proper operation.

3. Do not operate this log set with glass doors in the closed position. A fireplace screen must be in place when the log set is burning. Adequate combustion air must be provided for proper venting. All flames should go up and out the top of the firebox into the flue vent. If any flames float or curl forward into the room do not operate appliance. Check for an open flue and adequate combustion air into the room. A damper clamp must be installed on the firebox damper to maintain an open flue vent condition.

4. Young children must be carefully supervised when they are in the same room as the gas log while in operation. Do not place stockings, clothing or any flammable material above or near the fireplace.

5. Do not substitute or use materials other than those supplied for use with the log set.

DO NOT OPERATE THIS GAS LOG SET WITH GLASS DOORS CLOSED.

- Due to high temperatures the appliance should be located out of traffic and away from furniture and draperies.
- Children and adults should be alerted to the hazards of high surface temperatures and should stay away to avoid burns or clothing ignition.
- Young children should be carefully supervised when they are in the same room as the appliance.
- Clothing or other flammable material should not be placed on or near the appliance.
- Do not place trash or other articles on the log set during operation.

See Parts Lists on page 14 for ordering replacement parts. Do not order batteries, bolts, screws, washers or nuts. They are standard hardware items and can be purchased at any local hardware store.

HARDWARE PACK CONTENTS

1/4” X 1 1/4” SLOTTED HEX HEAD ANCHOR SCREW
IMPORTANT SAFETY INFORMATION

• During manufacturing, fabricating and shipping, various components of this appliance are treated with certain oils, films or bonding agents. These bonding agents are not harmful but may produce annoying smoke and smells as they are burned off during initial operation of the appliance. This is a normal temporary occurrence. A window should be opened during the initial bake out period.

• Keep burner and control compartment clean.

⚠️ WARNING

• Before installing in a solid fuel burning fireplace, the chimney flue and firebox must be cleaned of soot, creosote, ashes and loose paint by a qualified chimney cleaner.
• Do not allow fans to blow directly into the fireplace. Avoid any drafts that alter burner flame patterns.
• Do not use a blower insert, heat exchanger insert or other accessory not approved for use with this appliance.

• Installation and repair should be done by a QUALIFIED SERVICE PERSON. The appliance should be inspected before use and at least annually by a qualified service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding materials, etc. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean.
• DO NOT put anything around the fireplace that will obstruct the flow of ventilation air.
• DO keep the appliance area clear and free from combustible material, gasoline and other flammable vapors and liquids.
• A yearly examination and cleaning of the venting system of the solid-fuel burning fireplace must be performed by a qualified agency.
• DO make a periodic visual check of pilot and burners. Clean and replace damaged parts.
• DO NOT use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

⚠️ WARNING

Follow all gas leak check procedures in this manual, prior to operation.

⚠️ WARNING

Fuels used in gas or oil-fired appliances, and the products of combustion of such fuels, contain chemicals known to the State of California to cause cancer, birth defects, and/or other reproductive harm. This warning is issued pursuant to California Health & Safety Code Sec. 25249.6.

While this appliance is not in use, the gas must be turned off at the gas supply.

DO NOT ATTEMPT TO DISCONNECT THE GAS OR ANY GAS FITTING WHILE THIS APPLIANCE IS IN OPERATION.

NEVER leave the decorative gas log set unattended while in operation.

NEVER allow children to operate this decorative gas log set.

NEVER place hands or fingers on the front edge of this decorative gas log set.

NEVER use liquid propane gas in a natural gas unit, or natural gas in a liquid propane unit.

DO NOT use solid-fuel or lighter fluid in any decorative gas log set.

Any safety screen or guard removed for servicing an appliance must be replaced prior to operating the appliance.

During manufacturing, fabrication, and shipping, various components of this appliance are treated with certain oils, films, or bonding agents. These chemicals ARE NOT harmful, but may produce annoying smoke and smells, as they are burned off, during the initial operation of the appliance. This may possibly cause headaches, and eye or lung irritation. This is a normal and temporary occurrence. The initial break-in period should last three to four hours. During this period, provide maximum ventilation by opening a window or door, to allow odors to dissipate. Any odor remaining after this initial break-in period, will be slight and will disappear with continued use.

PROPER CLEARANCES FROM COMBUSTIBLE CONSTRUCTION AND MATERIALS MUST BE MAINTAINED FROM ALL SIDES, TOP, AND BOTTOM OF THIS APPLIANCE.

THIS APPLIANCE SHOULD NEVER BE PLACED NEAR ANY COMBUSTIBLE SURFACE.

THIS APPLIANCE SHOULD NEVER BE PLACED UNDER ANY COMBUSTIBLE CONSTRUCTION OR MATERIALS.

NEVER PLACE ANY COMBUSTIBLE MATERIAL WITHIN TWENTY-FOUR INCHES (24") FROM THE FRONT OF THE FIREPLACE ENCLOSURE.

⚠️ WARNING

The Commonwealth of Massachusetts requires that the chimney flue damper, when used with decorative gas log sets, be welded open or completely removed. In the Commonwealth of Massachusetts, this appliance must be installed by a licensed plumber or gasfitter.

⚠️ WARNING

Improper installation, adjustment, alteration, service or maintenance, can cause property damage, personal injury or loss of life. Refer to the owner's information manual, provided with this appliance. Installation and service must be performed by a qualified installer, service agency or the gas supplier.
Qualified Installing Agency
Installation and replacement of gas piping, gas utilization equipment or accessories and repair and servicing of equipment shall be performed only by a qualified agency. The term "qualified agency" means any individual, firm, corporation or company which either in person or through a representative is engaged in and is responsible for (a) the installation or replacement of gas piping or (b) the connection, installation, repair or servicing of equipment, who is experienced in such work, familiar with all precautions required and has complied with all the requirements of the authority having jurisdiction.

Commonwealth of Massachusetts: The installation must be made by a licensed plumber or gas fitter in the Commonwealth of Massachusetts.

The installation and the provisions for combustion and ventilation air must conform with the National Fuel Gas Code, ANSI Z223.1/NFPA54* Canadian Installation Code CAN/CGA B149.

*Available from the American National Standards Institute, Inc. 11 West 42nd St., New York, N.Y. 10018.

High Altitude Installation
When installing this unit at an elevation above 2000 feet (in the United States) it may be necessary to decrease the input rating by changing the existing burner orifice to a smaller size. Generally, input should be reduced 4 percent for each 1000 feet above sea level. However, if the heating value of the gas has been reduced, this general rule may not apply. Check with local gas utility for proper orifice size identification.

For Canadian high altitude applications, this appliance is suitable for installation at elevations between 0 feet (0m) and 4,500 (1,370m) without change.

When installing this unit at an elevation above 4500 feet (1,370m) (in Canada), check with local authorities.

Consult your local gas utility for assistance in determining the proper orifice for location.

FIREPLACE PREPARATION

- Turn off gas supply to fireplace or firebox.
- Have the fireplace floor and chimney professionally cleaned to remove ashes, soot, creosote or other obstructions. Have this cleaning performed annually after installation.
- Seal any fresh air vents or ash clean-out doors located on floor or wall of fireplace. If not, drafting may cause pilot outage or sooting. Use a heat-resistant sealant. Do not seal chimney flue damper.

Installing Damper Clamp (Figure 2)
Remove all ashes or other debris from the fireplace. If the fireplace is equipped with an ash dump be sure to seal the door with furnace cement or high temperature silicone. Be sure to check the damper for proper operation and verify that the flue passageway is open. Attach damper clamp to the vent damper and tighten hold down bolt.

Place the clamp over the lip of the damper and tighten the hold down bolt until the clamp is securely attached to the damper. This will prevent the damper from accidentally closing.

---

Figure 2

TYPICAL FIREPLACE
**BEFORE FULLY INSTALLING THE APPLIANCE**

You must secure the gas burner to the fireplace floor. If not, the entire unit may move when you adjust the controls. Movement of unit may cause shifting of the gas logs which leads to sooting and improper burning. Grate movement could cause a gas leak.

Special care is required if you are installing the unit into a sunken fireplace. You must raise the fireplace floor to allow access to gas log controls. This will insure adequate air flow and guard against sooting. Raise the fireplace floor using noncombustible materials.

**Assembly Procedure:**
1. Center the appliance in the fireplace or firebox. Make certain the front feet of the grate sit inside the front edge of the fireplace or firebox.
2. An anchor hole is provided in the two bottom side members of the grate frame. After centering the grate correctly, mark the hole positions on the fireplace/firebox floor. Drill two (2) 5/32” diameter holes approximately 1-1/2” deep for masonry screws or 1/8” hole for sheet metal screws.
3. Anchor the grate to the fireplace/firebox floor using the screws provided. Refer to **Figure 13**.

Proper installation of the grate is essential to prevent any movement of the gas logs and controls during operation.

---

**INTRODUCTION**

**Introduction**
Always consult your local Building Department regarding regulations, codes or ordinances which apply to the installation of a vented decorative gas log set in a solid-fuel burning fireplace. This appliance is only for use with the type of gas indicated on the rating plate.

**Instructions to Installer**
1. Installer must leave instruction manual with owner after installation.
2. Installer must have owner fill out and mail warranty card supplied with the fireplace.
3. Installer should show owner how to start and operate the fireplace.

**WARNING**

ANY CHANGE TO THIS APPLIANCE OR ITS CONTROLS CAN BE DANGEROUS. Improper installation or use of the appliance can cause serious injury or death from fire, burns, explosion or carbon monoxide poisoning.

**General Information**
Any alteration of the original design, installed other than as shown in these instructions or use with a type of gas not shown on the rating plate is the responsibility of the person and company making the change.

**Important**
All correspondence should refer to complete Model No., Serial No. and type of gas.

**NOTICE:** During initial use of the ceramic logs and branches you will detect an odor as the ceramic logs and branches are cured.

**NOTICE:** Thermostats are for Vent-Free Applications only.

For Double Burners without control valves (match-light) the fireplace minimum front width above allows for centering the log set. When adding valve kit to a Double Burner, add 4 inches to minimum fireplace width shown above for size 18 log set; add 6 inches for sizes 24 and 30.

**NOTICE:** Natural gas match throw sets may be used in some areas. Check your local codes for this configuration.

## HIGH ALTITUDE DE-RATE

In the U.S.A., input BTU shall be de-rated at 4% (1 orifice size) per 1000 feet for altitudes above 2000 feet. In Canada, input BTU shall be de-rated 10% (2 orifice sizes) at altitudes from 2000 feet to 4500 feet.

![Fireplace Diagram](image)
GAS SUPPLY

Check all local codes for requirements, especially for the size and type of gas supply line required.

</tr>
</tbody>
</table>

**NOTICE:** Never use plastic pipe. Check to confirm whether your local codes allow copper tubing or galvanized.

**NOTICE:** Since some municipalities have additional local codes, it is always best to consult your local authority and installation code.

**Installing a New Main Gas Cock**

Each appliance should have its own manual gas cock.

In the Commonwealth of Massachusetts the gas cock must be a T handle type.

A manual main gas cock should be located in the vicinity of the unit. Where none exists, or where its size or location is not adequate, contact your local authorized installer for installation or relocation.

Compounds used on threaded joints of gas piping shall be resistant to the action of liquefied petroleum gases. The gas lines must be checked for leaks by the installer. This should be done with a soap solution watching for bubbles on all exposed connections, and if unexposed, a pressure test should be made.

Never use an exposed flame to check for leaks. Appliance must be disconnected from piping at inlet of control valve and pipe capped or plugged for pressure test. Never pressure test with appliance connected; control valve will sustain damage!

A gas valve and ground joint union should be installed in the gas line upstream of the gas control to aid in servicing. It is required by the National Fuel Gas Code that a drip line be installed near the gas inlet. This should consist of a vertical length of pipe tee connected into the gas line that is capped on the bottom in which condensation and foreign particles may collect.

The use of the following gas connectors is recommended:

- ANSI Z21.24 Appliance Connectors of Corrugated Metal Tubing and Fittings
- ANSI Z21.45 Assembled Flexible Appliance Connectors of Other Than All-Metal Construction

The above connectors may be used if acceptable by the authority having jurisdiction. The state of Massachusetts requires that a flexible appliance connector cannot exceed three feet in length.

**Figure 4**

**Pressure Testing of the Gas Supply System**

1. To check the inlet pressure to the gas valve, a 1/8” (3.175mm) N.P.T. plugged tapping, accessible for test gauge connection, must be placed immediately upstream of the gas supply connection to the appliance.

2. The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa).

3. The appliance must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa).

**Attention!** If one of the procedures results in pressures in excess of 1/2 psig (14 w.c.) (3.5 kPa) on the appliance gas valve, it will result in a hazardous condition.
INSTALLATION

NOTICE: Installation can be made easier if two or more people cooperate in locating and installing the unit.

LOCATING THE UNIT
This appliance must be installed only in a solid-fuel burning fireplace, which contains a working flue, and is constructed of non-combustible materials.

IMPORTANT
Before installing this appliance, have the fireplace and chimney professionally cleaned to remove any ashes, soot, creosote, or other obstructions. Perform this cleaning annually after installation.

IMPORTANT
For units with valve applications, complete pilot placement and gas train assembly before you place the unit into the fireplace.

IMPORTANT
Seal any fresh air vents or ash clean-out doors located on the floor or wall of the fireplace. If this is not performed, drafting may cause pilot outage or sooting. Use a heat-resistant sealant. DO NOT seal the chimney flue damper.

WARNING
Gas supply system must be installed in accordance with the U.S. National Fuel Gas Code. This appliance and its individual shut off valve must be disconnected from the gas supply piping system during any system pressure test in excess of 1/2 PSI (3.5 KPA). Use a system manual shut off valve to shut off the gas supply to this gas appliance before continuing with installation procedures.

WARNING
When installing the appliance, do not obstruct the flow of combustion and ventilation air.

Figure 3 - Burner Pan

SET UP AND ASSEMBLY
Your Decorative Gas Log Hearth Kit comes ready for gas assembly connection particular for use in your area.

IMPORTANT
BEFORE YOU BEGIN - Audit the gas pressure at the fireplace stub to insure proper minimum gas pressure (see the specifications beginning on page 6 of this manual).

IMPORTANT
BEFORE YOU BEGIN - Insure that the firebox meets the minimum specifications of the appliance (see the specifications beginning on page 6 of this manual).

IMPORTANT
This appliance when first installed may produce unpleasant odors; these will gradually diminish.

IMPORTANT
Decorative Gas Log Sets are shipped with the appropriate gas connections for each type of gas (Natural Gas). If you have purchased an inappropriate unit for your application, contact your retailer, installer or the Customer Service Center.

TOOLS NEEDED
2 Adjustable Wrench (at least one of which has a range of 3/4” for gas fittings)
2 Adjustable Pipe Wrenches
1 3/8” Nut Driver or Socket (for damper clamp)

BEGINNING INSTALLATION
1. Remove all contents from the burner shipping container (Box One).
2. Check the contents of the shipping container against the shipping and packing list or the parts list in this manual. Report any missing or damaged parts to your retailer.
3. Remove any and all protective wrapping from the appliance.
4. TURN OFF THE GAS SUPPLY SYSTEM.
5. Place the fireplace damper in the fully open position and install the damper clamp over the lip of the damper (the damper must be in a fully open position any time that this appliance is in operation). Using a 3/8” nut driver or socket and turning in a clockwise direction, tighten the damper clamp bolt until the clamp is secure. The damper clamp must be in place to maintain the minimum permanent vent opening. See the chart “Minimum Fireplace Dimensions” on page 6 for correct venting.

NOTICE: The Commonwealth of Massachusetts requires that the chimney flue damper, when used with decorative gas log sets, be welded open or completely removed.

6. Using two adjustable pipe wrenches (one wrench on the gas stub, and one wrench on the fitting), remove the existing cap or gas jet assembly from the gas stub in the fireplace by turning the wrench on the gas cap in a counterclockwise direction.
7. Clean the pipe threads on the gas stub using either a wire brush or steel wool. Apply Teflon tape or pipe dope to the steel fittings before making any connection.

NOTICE: All gas connections (except for brass to brass) require Teflon tape or pipe dope.
INSTALLATION

INSTALLING THE APPLIANCE INTO A FIREPLACE

1. Place the Burner Pan into the fireplace. The unit should be centered from both side to side and front to back in the fireplace. The unit is shipped ready for right side gas connection only. See Figure 2.

2. Bend a 3/8” gas line to facilitate the gas connection between the burner and the gas stub.

---

**CAUTION**

Gas lines are easily kinked if bent too sharply.

3. Using two adjustable wrenches, and turning in a clockwise direction, attach one end of the gas line to the brass reducer fitting installed in the previous step (one wrench on the brass gas line fitting, and one wrench on the brass reducer fitting).

4. Using two adjustable wrenches, and turning in a clockwise direction, attach the other end of the gas line to the brass fitting on the burner (one wrench on the gas line fitting, and one wrench on the brass fitting on the burner).

---

**CAUTION**

Make sure all gas connections are snug but DO NOT over tighten!

---

**STOP! IT IS OUR RECOMMENDATION TO LIGHT THE PILOT AND TEST THE IGNITION BEFORE ATTEMPTING TO SET UP THE LOGS.**

5. **CHECK FOR LEAKS!** Apply soapy water to each connection and watch for bubbles. If bubbles are seen, turn off the gas supply, retighten the connections and **CHECK AGAIN. DO NOT** use a lighted match or other source of ignition to check for leaks. Repeat this procedure until you are sure that there are no leaks. Proceed to “FINAL SET UP on page 11.

---

FOR UNITS WITH REMOTE SYSTEMS

Millivolt burner systems are capable of operating with a remote control system. See the instructions packaged with the remote system that you have purchased for detailed installation and operational characteristics. The following instructions are a general guide for installation only. See Page 11.

Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.
FINAL SET UP

**WARNING**

Failure to position the parts in accordance with all included pictures, diagrams and drawings, or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

**IMPORTANT**

Add a bead of silicon around outer edge of burner pan. See Figure 4.

1. Pour the provided sand over the entire burner, filling the burner pan. The sand (rockwool mix) should follow the slope of the burner pan, covering the burner completely. See Figure 17.

![Figure 17](image)

2. Spread the Glowing Embers over the bottom portion of the burner. See Figure 18.

![Figure 18](image)

**WARNING**

Apply loose material (embers and lava rock [cinders]) per instruction manual. DO NOT apply extra material not supplied with this appliance. All previously applied loose material (embers) must be removed prior to reapplication.

**CAUTION**

DO NOT place glowing embers, sand, rockwool mix, or lava rock (cinders) in the area of the safety pilot assembly.

**STOP!**

Refer to the log set up instructions packaged with your Decorative Gas Logs.

3. Remove all contents from the Decorative Gas Log shipping container (Box Two).
4. Check the contents of the shipping container against the shipping and packing list or the parts list in this manual. Report any missing or damaged parts to your retailer.
5. Remove any and all protective wrapping from the gas logs.
6. Arrange the decorative gas logs on the grate.
7. Place the Lava Rock (cinders) around the Grate/Burner Assembly. See Figure 19.
8. DO NOT pack cinders around valve. The valve will overheat! You must allow air flow around the valve.
9. When you have completed setting up the logs, proceed to the operation section.
PILOT AND MAIN BURNER FLAME CHARACTERISTICS

If pilot flame pattern is incorrect
- See Troubleshooting, page 13

Main Burner Flame Pattern
The main burner flame will be completely yellow.

Main Burner Flame Ignition and Extinction
When the main burner is ignited it will take a few seconds for the full flame pattern to develop.

When the main burner is extinguished it will take a few seconds for the flames to disappear. It is normal to have the flames burn down near the rock wool, as the remaining gas is burned.

CLEANING AND SERVICING

Keep the control compartment, logs and burner area surrounding the logs clean.

THE LOGS CAN GET VERY HOT—HANDLE ONLY WHEN COOL.
Always keep the appliance area clear and free from combustible materials, gasoline, and other flammable vapors and liquids.
Never obstruct the flow of combustion and ventilation air. Keep the front of the appliance clear of all obstacles and materials.

Inspecting Venting System
A vented fireplace venting system is designed and constructed to develop a positive flow adequate to remove flue gases to the outside atmosphere.
Any foreign objects in the venting system, may cause spillage of the flue gases into the room.
Periodic examination and/or cleaning of the venting system of the solid-fuel burning fireplace must be done by a qualified service person. Visually inspect the damper and flue area for excessive soot build-up. This soot (carbon) may be removed by brushing with a soft bristle brush.

OPERATION

⚠️ WARNING
Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and replace any part of the control system and any gas control that has been under water.

Follow these instructions exactly when lighting the appliance. BEFORE LIGHTING, smell around the appliance area for gas. Be sure to smell next to the floor, as L.P. gas is heavier than air and will settle to the floor. Use only your hand to rotate the gas control knob. Never use tools. If the knob will not turn by hand, do not try to repair it; call a qualified service technician or installer. Force or attempted repair may result in a fire or explosion.

⚠️ WARNING
All gas burning appliances produce smoke and carbon monoxide gas during operation. These fumes can be harmful if the appliance is used in any other than a fully vented fireplace.

⚠️ WARNING
A fireplace screen must be in place when this appliance is in operation. Unless other provisions for combustion air are provided, the screen shall have an opening(s) for introduction of combustion air.

⚠️ WARNING
When this decorative gas appliance is used in a fireplace equipped with a combustion air kit and glass doors, the glass doors should remain open during log set operation. This will maximize the radiant heat provided to the surrounding area, and minimize overheating of any valve installation. The glass doors may be closed when the log set is not in use.
MAINTENANCE & SERVICE

The Decorative Gas Log Set should be thoroughly inspected on a regular basis at least once a year by a qualified installer. At the beginning of each season, the system should be checked as follows:

1. Check the chimney flue or vent pipe to make sure that the flue is drawing properly, and that any vent pipe connections are tight.
2. Check to see that there are no blockages at the chimney or vent termination.
3. Check for creosote and soot build-up in chimney and/or vents and clean if necessary.
4. Inspect the pilot and burners (if applicable).

The burner system has been adjusted for proper operation at the factory. No adjustment is necessary, other than altitude de-rate or pilot flame.

NEVER enlarge valve orifices or burner ports.

SOOTING

Some sooting of your log set is normal, adding to the appearance of burned wood. If excessive sooting accumulates, clean the logs using either of the following options:

A. While the logs are burning and hot, spray the logs with clean water. The soot will lift off and burn off.
B. When the logs are cold, brush the soot off with a stiff brush. Do not use water or soot cleaners at the same time as a brush.

**HOW TO ORDER REPAIR PARTS**

**Parts Not Under Warranty**

Parts can be ordered through your Service Person, Dealer, or a Master Parts Distributor. See this page for the Master Parts Distributors list. For best results, the service person or dealer should order parts through the distributor. Parts can be shipped directly to the service person/dealer.

**Warranty Parts**

Warranty parts will need a proof of purchase and can be ordered by your Service Person or Dealer. Proof of purchase is **required** for warranty parts.

All parts listed in the Parts List have a Part Number. When ordering parts, first obtain the Model Number and Serial Number from the name plate on your equipment. Then determine the Part Number (not the Index Number) and the Description of each part from the following illustration and part list. Be sure to give all this information . . .

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Do not order bolts, screws, washers or nuts. They are standard hardware items and can be purchased at any local hardware store. Shipments contingent upon strikes, fires and all causes beyond our control.
WARRANTY

Empire Comfort Systems Inc. warranties this hearth product to be free from defects at the time of purchase and for the periods specified below. Hearth products must be installed by a qualified technician and must be maintained and operated safely, in accordance with the instructions in the owner’s manual. This warranty applies to the original purchaser only and is not transferable. All warranty repairs must be accomplished by a qualified gas appliance technician.

**Limited Lifetime – Refractory Logs**
Should any part fail because of defective workmanship or material during the normal life of this product, Empire will repair or replace at Empire’s option.

**Limited Five-Year Parts Warranty – Burners, Grates, Ceramic Fiber Logs**
Should any part fail because of defective workmanship or material within five years from the date of purchase, Empire will repair or replace at Empire’s option.

**Limited Two-Year Parts Warranty – Valves**
Should the valve fail because of defective workmanship or material within two years from the date of purchase, Empire will repair or replace at Empire’s option.

**Limited One-Year Parts Warranty – Remote Controls, Accessories, and Parts**
Should any remote control, thermostat, accessory, or other part fail because of defective workmanship within one year from the date of purchase, Empire will repair or replace at Empire’s option.

**Duties of the Owner**
The appliance must be installed by a qualified installer and operated in accordance with the instructions furnished with the appliance. A bill of sale, cancelled check, or payment record should be kept to verify purchase date and establish warranty period. Ready access to the appliance for service.

**What Is Not Covered**
- Damages that might result from the use, misuse, or improper installation of this appliance.
- Travel, diagnostic costs and freight charges on warranted parts to and from the factory.
- Claims that do not involve defective workmanship or materials.
- Unauthorized service or parts replacements.
- Removal and reinstallation cost.
- Inoperable due to improper or lack of maintenance.

**How To Get Service**
To make a claim under this warranty, please have your receipt available and contact your installing dealer. Provide the dealer with the model number, serial number, type of gas, and purchase verification. The installing dealer is responsible for providing service and will contact the factory to initiate any warranted parts replacements. Empire will make replacement parts available at the factory. Shipping expenses are not covered.
If, after contacting your Empire dealer, service received has not been satisfactory, contact: Consumer Relations Department, Empire Comfort Systems Inc., PO Box 529, Belleville, Illinois 62222, or send an e-mail to info@empirecomfort.com with “Consumer Relations” in the subject line.

**Your Rights Under State Law**
This warranty gives you specific legal rights, and you may also have other rights, which vary from state to state.
