VISTA SLOPE GLAZE SEE-THRU OR PENINSULA BURNER

UNVENTED GAS LOG BURNER OR VENTED DECORATIVE BURNER MODELS:
VFSUR(18,24,30)-3
VFSUE(18,24,30)-1

INSTALLER:
Leave this manual with the appliance.

CONSUMER:
Retain this manual for future reference.

⚠️ WARNING
FIRE OR EXPLOSION HAZARD
Failure to follow safety warnings exactly could result in serious injury, death or property damage.

— Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
— WHAT TO DO IF YOU SMELL GAS
  • Do not try to light any appliance.
  • Do not touch any electrical switch; do not use any phone in your building.
  • Leave the building immediately.
  • Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier's instructions.
  • If you cannot reach your gas supplier, call the fire department.
— Installation and service must be performed by a qualified installer, service agency or the gas supplier.

This appliance may be installed in an aftermarket permanently located, manufactured (mobile) home, where not prohibited by local codes.
This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

⚠️ WARNING
If not installed, operated and maintained in accordance with the manufacturer's instructions, this product could expose you to substances in fuel or from fuel combustion which can cause death or serious illness.

This is an unvented gas-fired heater. It uses air (oxygen) from the room in which it is installed. Provisions for adequate combustion and ventilation air must be provided. Refer to page 11.

WATER VAPOR: A BY-PRODUCT OF UNVENTED ROOM HEATERS
Watervapor is aby-product of gas combustion. An unvented room heater produces approximately one (1) ounce (30ml) of water for every 1,000 BTU’s (.3KW’s) of gas input per hour. Refer to page 11.

We suggest that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists.

Burner Assembly  
Lava Rock Packet  
Soot Warning Sheet

Installation Package:
- Rockwool Package  
- Damper Clamp  
- Installation Instructions  
- Serial Number Tag  
- Warranty Card

Hardware Package: (See Figures Below)
- #10 X 1/2" Phillips Hex Head Screw (3)  
- 1/4" X 1 1/4" Slotted Hex Head Anchor Screw (3)

HARDWARE PACKAGE

#10 X ½" PHILLIPS HEX HEAD SCREW (3)  
1/4" X 1 1/4" SLOTTED HEX HEAD ANCHOR SCREW (3)

Hardware shown to scale where possible.
IMPORTANT SOOT PREVENTION STEPS

⚠️ NOTICE  IMPORTANT NOTICE ⚠️
INSTALLER - SERVICE PERSON - HOMEOWNER

SOOT MAY BE CREATED IF THE FOLLOWING DIRECTIONS ARE NOT FOLLOWED.

⚠️ WARNING
Failure to keep the primary air openings of the burner clean may result in sooting and property damage.

⚠️ WARNING
Before installing in a solid-fuel burning fireplace, the chimney flue and firebox must be cleaned of soot, creosote, ashes and loose paint by a qualified chimney cleaner.

- Check that the correct air shutter is installed. See table on Page 5.
- Ensure burner, venturi, and air shutter are free of dirt, lint, animal hair (i.e. cat and dog) or anything that may block the needed air flow. See Cleaning and Servicing, page 31.

⚠️ WARNING
Do not allow fans to blow directly into the fireplace. Avoid any drafts that alter burner flame patterns. Pay particular attention to ceiling fans and exhaust fans.

- Do not place debris, logs or other articles on burner.
- Avoid the use of scented air fresheners while the fireplace is in operation. A residue can be produced which may produce soot.
- Avoid the use of decorative or scented candles while the fireplace is in operation. Soot may be produced from the by-products of a burning candle. Some candles also produce soot.
- Do not place rock wool (embers) over the large ports of the burner.
- Do not place lava rocks on burner or burner ports. Lava rock is only to be placed on the fireplace floor.
- Check level of ceramic media in burner, if burner has ceramic media. Burner should be full, up to the ported burner surface.
- Install logs according to the installation instructions. Do not alter log placement from the prescribed layout. Only use Empire logs made for this burner.
- Annual inspection and cleaning by your dealer or qualified service technician is recommended to prevent malfunction and/or sooting.
- Verify the venturi tube is not bent or distorted. The main burner orifice must be centered in the venturi tube for proper combustion and to prevent sooting.

IMPORTANT SAFETY INFORMATION

⚠️ DANGER: Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING: Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION: Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

NOTICE: Addresses practices not related to personal injury.

• An unvented room heater having an input rating of more than 6,000 Btu per hour shall not be installed in a bathroom
• An unvented room heater having an input rating of more than 10,000 Btu per hour shall not be installed in a bedroom or bathroom.
• Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.
• Children and adults should be alerted to the hazard of high surface temperature and should stay away to avoid burns or clothing ignition.
• Young children should be carefully supervised when they are in the same room with the appliance.
• Do not place clothing or other flammable material on or near the appliance.
• Avoid the use of scented air fresheners (plug in type air fresheners, etc.) while the log set is in operation. Air fresheners produce a residue in the air similar to candles and may produce a soot like substance.
• Avoid the use of scented or decorative candles while the log set is in operation. Candles produce a residue in the air that creates a soot like substance. Burning candles while the log set is operating magnifies the problem. It should be noted that candles, in general, produce soot. The amount of time burned and the quantity of candles burned will determine the amount of soot produced and deposited.
• Installation and repair should be done by a QUALIFIED SERVICE PERSON. This appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding materials, etc. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean.
• DO NOT use this room heater if any part has been under water. Immediately call a qualified service technician to inspect the room heater and to replace any part of the control system and any gas control which has been under water.
• You must operate heater with fireplace screen in place.
• Do not place trash, logs or other articles on the log set during operation.
• During manufacturing, fabricating and shipping, various components of this appliance are treated with certain oils, films or bonding agents. These bonding agents are not harmful but may produce annoying smoke and smells as they are burned off during initial operation of the appliance. This is a normal temporary occurrence. A window should be opened during the initial bake out period.
• Correct installation of the ceramic fiber logs, proper location of the heater and annual cleaning are necessary to avoid potential problems with sooting. Sooting, resulting from improper installation or operation, can settle on surfaces outside the fireplace. See instructions for proper installation.
• ⚠️ WARNING: Do not allow fans to blow directly into the fireplace. Avoid any drafts that alter burner flame patterns.
• ⚠️ WARNING: Do not use a blower insert, a heat exchanger insert or other accessory not approved for use with this heater.

⚠️ WARNING! This fireplace needs fresh air for ventilation to run properly. This fireplace has an ODS (oxygen depletion sensor) which will shut down the heater if adequate fresh air is not available. See troubleshooting section in the instructions.

⚠️ WARNING: DO NOT operate this appliance unless all components including logs, burners, and controls are in good working condition. Never operate this appliance if any log or twig is broken, or out of their intended position. Refer to the Log set placement instructions for correct log and twig positioning.

Replacement components are available through your local dealer as indicated in the How to Order Repair Parts section of the appliance manual.

• Keep appliance area clear and free from combustible materials, gasoline and other flammable vapors and liquids.

⚠️ WARNING: Failure to keep the primary air opening(s) of the burner(s) clean may result in sooting and property damage.

⚠️ WARNING

When used without adequate combustion and ventilation air, heater may give off CARBON MONOXIDE, an odorless, poisonous gas.

Do not install heater until all necessary provisions are made for combustion and ventilation air. Consult the written instructions provided with the heater for information concerning combustion and ventilation air. In the absence of instructions, refer to the National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation, or applicable local codes.

This heater is equipped with a PILOT LIGHT SAFETY SYSTEM designed to turn off the heater if not enough fresh air is available.

DO NOT TAMPER WITH PILOT LIGHT SAFETY SYSTEM!

If heater shuts off, do not relight until you provide fresh air.

If heater keeps shutting off, have it serviced. Keep burner and control compartment clean.

CARBON MONOXIDE POISONING MAY LEAD TO DEATH.

Early signs of carbon monoxide poisoning resemble the flu, with headache, dizziness and/or nausea. If you have these signs, heater may not be working properly. Get fresh air at once! Have heater serviced.

Some people — pregnant women, persons with heart or lung disease, anemia, those under the influence of alcohol, those at high altitudes — are more affected by carbon monoxide than others.

The pilot light safety system senses the depletion of oxygen at its location. If this heater is installed in a structure having a high vertical dimension, the possibility exists that the oxygen supply at the higher levels will be less than that at the heater. In this type of application, a fan to circulate the structure air will minimize this effect. The use of this fan will also improve the comfort level in the structure. When a fan is used to circulate air, it should be located so that the air flow is not directed at the burner.
Propane is a flammable gas which can cause fires and explosions. In its natural state, propane is odorless and colorless. You may not know all the following safety precautions which can protect both you and your family from an accident. Read them carefully now, then review them point by point with the members of your household. Someday when there may not be a minute to lose, everyone’s safety will depend on knowing exactly what to do. If, after reading the following information, you feel you still need more information, please contact your gas supplier.

**PROpane GAS WARNING ODOR**

If a gas leak happens, you should be able to smell the gas because of the odorant put in the Propane Gas. That’s your signal to go into immediate action!

- Do not operate electric switches, light matches, use your phone. Do not do anything that could ignite the gas.
- Get everyone out of the building, vehicle, trailer, or area. Do that IMMEDIATELY.
- Close all gas tank or cylinder supply valves.
- Propane Gas is heavier than air and may settle in low areas such as basements. When you have reason to suspect a gas leak, keep out of basements and other low areas. Stay out until firefighters declare them to be safe.
- Use your neighbor’s phone and call a trained Propane Gas service person and the fire department. Even though you may not continue to smell gas, do not turn on the gas again. Do not re-enter the building, vehicle, trailer, or area.
- Finally, let the service man and firefighters check for escaped gas. Have them air out the area before you return. Properly trained Propane Gas service people should repair the leak, then check and relight the gas appliance for you.

**NO ODOR DETECTED - ODOR FADE**

Some people cannot smell well. Some people cannot smell the odor of the chemical put into the gas. You must find out if you can smell the odorant in propane. Smoking can decrease your ability to smell. Being around an odor for a time can affect your sensitivity or ability to detect that odor. Sometimes other odors in the area mask the gas odor. People may not smell the gas odor or their minds are on something else. Thinking about smelling a gas odor can make it easier to smell.

**The odorant in Propane Gas is colorless, and it can fade under some circumstances.** For example, if there is an underground leak, the movement of the gas through soil can filter the odorant. Odorants in Propane Gas also are subject to oxidation. This fading can occur if there is rust inside the storage tank or in iron gas pipes.

The odorant in escaped gas can adsorb or absorb onto or into walls, masonry and other materials and fabrics in a room. That will take some of the odorant out of the gas, reducing its odor intensity.

Propane Gas may stratify in a closed area, and the odor intensity could vary at different levels. Since it is heavier than air, there may be more odor at lower levels. Always be sensitive to the slightest gas odor. If you detect any odor, treat it as a serious leak. Immediately go into action as instructed earlier.

**SOME POINTS TO REMEMBER**

- Learn to recognize the odor of Propane Gas. Your local Propane Gas Dealer can give you a “Scratch and Sniff” pamphlet. Use it to find out what the propane odor smells like. If you suspect that your Propane Gas has a weak or abnormal odor, call your Propane Gas Dealer.
- If you are not qualified, do not light pilot lights, perform service, or make adjustments to appliances on the Propane Gas system. If you are qualified, consciously think about the odor of Propane Gas prior to and while lighting pilot lights or performing service or making adjustments.
- Sometimes a basement or a closed-up house has a musty smell that can cover up the Propane Gas odor. Do not try to light pilot lights, perform service, or make adjustments in an area where the conditions are such that you may not detect the odor if there has been a leak of Propane Gas.
- Odor fade, due to oxidation by rust or adsorption on walls of new cylinders and tanks, is possible. Therefore, people should be particularly alert and careful when new tanks or cylinders are placed in service. Odor fade can occur in new tanks, or reinstalled old tanks, if they are filled and allowed to set too long before refilling. Cylinders and tanks which have been out of service for a time may develop internal rust which will cause odor fade. If such conditions are suspected to exist, a periodic sniff test of the gas is advisable. If you have any question about the gas odor, call your Propane Gas dealer. A periodic sniff test of the Propane Gas is a good safety measure under any condition.
- If, at any time, you do not smell the Propane Gas odorant and you think you should, assume you have a leak. Then take the same immediate action recommended above for the occasion when you do detect the odorized Propane Gas.
- If you experience a complete “gas out,” (the container is under no vapor pressure), turn the tank valve off immediately. If the container valve is left on, the container may draw in some air through openings such as pilot light orifices. If this occurs, some new internal rusting could occur. If the valve is left open, then treat the container as a new tank. Always be sure your container is under vapor pressure by turning it off at the container before it goes completely empty or having it refilled before it is completely empty.
**INTRODUCTION**

**IMPORTANT:** Read all instructions carefully before starting installation. Failure to follow these installation instructions may result in a possible fire hazard and will void the warranty. Save this manual for future reference.

Please read this manual before installing and using the appliance.

**INSTRUCTIONS TO INSTALLER**

1. Installer must leave instruction manual with owner after installation.
2. Installer must have owner fill out and mail warranty card supplied with unvented room heater/vented decorative appliance.
3. Installer should show owner how to start and operate unvented room heater/vented decorative appliance.

Always consult your local Building Department regarding regulations, codes or ordinances which apply to the installation of an unvented room heater/vented decorative appliance.

This appliance may be installed in an aftermarket* manufactured (mobile) home, where not prohibited by state or local codes.

*Aftermarket: Completion of sale, not for purpose of resale, from the manufacturer.

**WELL HEAD GAS INSTALLATIONS**

Some natural gas utilities use “well head” gas. This may affect the Btu output of the unit and promote sooting. Units shall not be converted to use well head gas.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

**NEW INSTALLATION**

Solid-fuels shall not be burned in a fireplace where a vented decorative appliance is installed.

A vented decorative appliance must be installed only in a solid-fuel burning fireplace with a working flue and constructed of non-combustible material.

Any alteration of the original design, installed other than as shown in these instructions or use with a type of gas not shown on the rating plate is the responsibility of the person and company making the change.

**IMPORTANT**

All correspondence should refer to complete Model Number, Serial Number and type of gas.

---

**WARNING**

This appliance is for installation only in a solid-fuel burning masonry or UL 127 factory-built fireplace or in a listed ventless firebox enclosure. It has been design certified for these installations. Exception: DO NOT install this appliance in a factory-built fireplace that includes instructions stating it has not been tested or should not be used with unvented gas logs.

---

**WARNING**

Any modification to this unvented gas heater or its controls can be dangerous. Improper installation or use of the heater can cause serious injury or death from fire, burns, explosion or carbon monoxide poisoning.

---

Attention: During initial use of log you will detect an odor as the log is cured.

**NOTICE:** During initial firing of this unit, its paint will bake out, and smoke will occur. To prevent triggering of smoke alarms, ventilate the room in which the unit is installed.
This is an unvented gas-fired heater. It uses air (oxygen) from the room in which it is installed. Provisions for adequate combustion and ventilation air must be provided.

Keep room area clear and free from combustible materials, gasoline and other flammable vapors and liquids.

Unvented gas heaters are a supplemental zone heater. They are not intended to be a primary heating appliance. Water vapor produced by an unvented heater can create moisture problems in a home when operated for extended periods of time.

During manufacturing, fabricating and shipping, various components of this appliance are treated with certain oils, films or bonding agents. These chemicals are not harmful but may produce annoying smoke and smells as they are burned off during the initial operation of the appliance; possibly causing headaches or eye or lung irritation. This is a normal and temporary occurrence.

The initial break-in operation should last 2-3 hours with the burner at the highest setting. Provide maximum ventilation by opening windows or doors to allow odors to dissipate. Any odors remaining after this initial break-in period will be slight and will disappear with continued use.

This appliance must not be used with glass doors in the closed position. This can lead to pilot outages and severe sooting outside the fireplace.

Do not use this room heater if any part has been under water. Immediately call a qualified service technician to inspect the room heater and replace any part of the control system and any gas control which has been under water.

**WARNING**

This appliance is equipped for (Natural or Propane) Gas. Field conversion is not permitted.

**BEFORE YOU GET STARTED**

Carefully inspect the contents for shipping damage. If any parts are missing or damaged, immediately inform the dealer from whom you purchased the appliance. Do not attempt to install any part of the appliance unless you have all parts in good condition.

Millivolt controlled heater (VFSUR) designed to be operated with optional devices for ON/OFF functions.

- Wall switch or thermostat with wire.
- Hand held remote control with ON/OFF switch or thermostat.

Handle the gas log burner assembly by the grate and legs only. Do not pick the unit up by the burner.

Gloves are recommended when handling logs to prevent skin irritation. Logs are fragile - Handle with care.

**Qualified Installing Agency**

Installation and replacement of gas piping, gas utilization equipment or accessories and repair and servicing of equipment shall be performed only by a qualified agency. The term "qualified agency" means any individual, firm, corporation, or company that either in person or through a representative is engaged in and is responsible for (a) the installation, testing, or replacement of gas piping or (b) the connection, installation, testing, repair, or servicing of equipment; that is experienced in such work; that is familiar with all precautions required, and that has complied with all the requirements of the authority having jurisdiction.

**Commonwealth of Massachusetts:** The installation must be made by a licensed plumber or gas fitter in the Commonwealth of Massachusetts.

Sellers of Unvented Propane or Natural Gas-Fired supplemental room heaters shall provide to each purchaser a copy of 527 CMR-30 upon sale of the unit.

In the Commonwealth of Massachusetts, Unvented Propane and Natural Gas-Fired space heaters shall be prohibited in bedrooms and bathrooms.

The installation must conform with local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1* or International Fuel Gas Code.

*Available from the American National Standards Institute, Inc. 11 West 42nd St., New York, N.Y. 10018.
This unit cannot be installed in a UNVENTED application, this unit can only be installed as a VENTED application with these requirements.

IMPORTANT SAFETY INFORMATION
This unit complies with ANSI Z21.60 and CGA 2.26 Decorative Gas Appliances For Installation In Solid Fuel Burning Fireplaces. Do not burn wood or solid fuels in a fireplace where a decorative gas log set is installed. This appliance is for installation only in a solid fuel burning fireplace, masonry fireplace or manufactured fireplace.

**WARNING**
Any modification to this gas log set or to controls can be dangerous. Improper installation or use of the gas log set can cause serious injury or death from fire, burns, explosion or carbon monoxide poisoning.

1. Please follow all local codes regarding installation, combustion and ventilation air or in the absence of local codes follow the National Fuel Gas Code ANSI Z223.1(U.S. installation), or CAN/CGA-B149, Installation Code (Canada installation).

2. Proper installation, burner pan location and log placement is important to achieve optimum look and performance of your gas log set. The logs have been designed for easy location and placement on the grate and must be followed for proper operation.

3. Do not operate this log set with glass doors in the closed position. A fireplace screen must be in place when the log set is burning. Adequate combustion air must be provided for proper venting. All flames should go up and out the top of the firebox into the flue vent. If any flames float or curl forward into the room do not operate appliance. Check for an open flue and adequate combustion air into the room. A damper clamp must be installed on the firebox damper to maintain an open flue vent condition. Refer to page 16 INSTALLING DAMPER CLAMP.

4. Young children must be carefully supervised when they are in the same room as the gas log while in operation. Do not place stockings, clothing or any flammable material above or near the fireplace.

5. Do not substitute or use materials other than those supplied for use with the log set.

6. Also refer to IMPORTANT SAFETY INFORMATION on page 6 of this manual.

**WARNING**
Before installing in a solid fuel burning fireplace, the chimney flue and firebox must be cleaned of soot, creosote, ash and loose paint by a qualified chimney cleaner.

- Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a qualified service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding materials, etc. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean.
  - Do not put anything around the fireplace that will obstruct the flow of ventilation air.
  - Do keep the appliance area clear and free from combustible material, gasoline and other flammable vapors and liquids.
  - A yearly examination and cleaning of the venting system of the solid-fuel burning fireplace must be performed by a qualified agency.
  - Do make a periodic visual check of pilot and burners. Clean and replace damaged parts.
  - Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
  - Never burn solid fuels in fireplace where a gas log set is installed.
  - This unit complies with ANSI Z21.60 Decorative Vented Appliances for Solid Fuel Burning Fireplaces. State or local codes may only allow operation of this appliance in a vented configuration. Check your state or local codes.
WATER VAPOR: A BY-PRODUCT OF UNVENTED ROOM HEATERS

Water vapor is a by-product of gas combustion. An unvented room heater produces approximately one ounce (30ml) of water for every 1,000 BTU's (.3KW's) of gas input per hour.

Unvented room heaters must be used as supplemental heat (a room) rather than a primary heat source (an entire house). In most supplemental heat applications, the water vapor does not create a problem. In most applications, the water vapor enhances the low humidity atmosphere experienced during cold weather.

The following steps will help insure that water vapor does not become a problem.

1. Be sure the heater is sized properly for the application, including ample combustion air and circulation air.
2. If high humidity is experienced, a dehumidifier may be used to help lower the water vapor content of the air.
3. Do not use an unvented room heater as the primary heat source (an entire house).

PROVISIONS FOR ADEQUATE COMBUSTION & VENTILATION AIR

This heater shall not be installed in a confined space unless provisions are provided for adequate combustion and ventilation air.

A confined space is an area with volume less than 50 cubic feet per 1,000 Btuh of the combined input rates of all appliances drawing combustion air from that space. Small areas such as equipment rooms are confined spaces. Furnaces installed in a confined space which supply heated air to areas outside the space must draw return air from outside the space through tightly sealed return air ducts. A confined space must have 2 openings into the space for combustion air. One opening must be within 12 inches of the ceiling and the other must be within 12 inches of the floor. The required sizing of these openings is determined by whether inside or outside air is used to support combustion, the method by which the air is brought to the space (vertical or horizontal duct) and by the total input rate of all appliances in the space.

Unusually Tight Construction

The air that leaks around doors and windows may provide enough fresh air for combustion and ventilation. However, in buildings of unusually tight construction, you must provide additional fresh air.

Unusually tight construction is defined as construction where:

a. Walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of one perm or less with openings gasketed or sealed, and
b. Weather-stripping has been added on openable windows and doors, and
c. Caulking or sealants are applied to areas such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical, and gas lines, and at other openings.

If your home meets all of the three criteria above, you must provide additional fresh air.

![Example of Large Room with 1/2 Wall divider.](image)

The following formula can be used to determine the maximum heater rating per the definition of unconfined space:

\[
\text{Btu/hr} = \frac{(L_1 + L_2)FT \times (W)FT \times (H)FT \times 1000}{50}
\]

If the area in which the heater may be operated is smaller than that defined as an unconfined space, provide adequate combustion and ventilation air by one of the methods described in the National Fuel Gas Code, ANSI Z223.1, Section 5.3.

Adhere to all codes, or in their absence, the latest edition of THE NATIONAL FUEL GAS CODE ANSI Z223.1 or NFPA54 which can be obtained from:

American National Standards Institute National Fire Protection Association, Inc.

11 West 42nd St. Batterymarch Park

The dimensions shown and defined in the fireplace manufacturer's instructions are minimum clearances to maintain in installing this heater. Left and right clearances are determined when facing the front of the heater.

**Glass Doors**

Make sure that glass doors are open during all operations of the logset. The opening of the glass door frame should be the dimension used for the minimum front opening of the firebox.

Follow these instructions to ensure safe installation.

Failure to follow instructions exactly can create a fire hazard.

Clearances to combustibles must be as stated in the manufacturer's Installation Instructions and/or Owner's Manual of the firebox this unit will be used in. If no clearances to combustibles are listed, the clearances must be as follows: The sides of the fireplace opening must be 6" from any combustible wall. The ceiling must be at least 41" from the fireplace opening. See Figure 3.

**Mantel Clearances Without Hood**

You must have non-combustible materials above the fireplace opening. Non-combustible material must extend at least 12" above fireplace opening. With sheet metal, you must have non-combustible material behind it.

Heat resistant materials such as slate and marble must be at least 1/2" thick. Sheet metal should not be installed onto combustible material.

If your installation does not meet the above clearances, you must proceed to one of the following steps:

- Use a hood.
- Operate the heater with flue damper open. See page 16 for Installing as a Vented Appliance.
- Raise the mantel to the proper height.
- Remove the mantel.

**Non-Combustible Material Distance**

<table>
<thead>
<tr>

<tr>
<td>Less than 12&quot;</td>
</tr>
<tr>
<td>Non-combustible material must be extended to at least 8&quot; with the installation of the optional fireplace hood. If you cannot extend non-combustible material at least 8&quot;, you must operate heater with flue damper open.</td>
</tr>
</tbody>
</table>
CLEARANCES (CONT'D)

Mantel Clearances with Hood
You must have non-combustible materials above the fireplace opening. Non-combustible material must extend at least 8" above fireplace opening. With sheet metal, you must have non-combustible material behind it.

Heat resistant materials such as slate and marble must be at least 1/2" thick. Sheet metal should not be installed onto combustible material.

Example: A mantel may project from the wall a maximum of 2" at a minimum of 8" above the opening, and a maximum of 6" at a minimum of 15" above the opening.

If your installation does not meet the above minimum clearances, you must proceed to one of the following steps:
• Operate the heater with the flue damper open. See page 16 for Installing as a Vented Appliance.
• Raise the mantel to the proper height.
• Remove the mantel.

Floor Clearance
If installing heater at floor level, the minimum distance to combustibles is "0" inches.

NOTE: If floor is sunken below the opening, the unit needs to be raised above the hearth level or the opening of the glass door surround.

Figure 5
Figure 6
Figure 6a
Do not attach combustible material to the mantel of your fireplace. This is a fire hazard.

No greeting card, stockings or ornamentation of any type should be placed on or attached to the fireplace. This is a heating appliance. The flow of heat can ignite combustibles.

**Figure 7**

**Figure 8**

### COMBUSTIBLE MATERIAL

Do not attach combustible material to the mantel of your fireplace. This is a fire hazard.

### FIREPLACE PREPARATION

**For Installation Into A See-Thru Or Peninsula Fireplace**

- Turn off gas supply to fireplace or firebox.
- Have the fireplace floor and chimney professionally cleaned to remove ashes, soot, creosote or other obstructions. Have this cleaning performed annually after installation.
- Seal any fresh air vents or ash clean-out doors located on floor or wall of fireplace. If not, drafting may cause pilot outage or sooting. Use a heat-resistant sealant. Do not seal chimney flue damper.
- Install and operate the appliance as directed in this manual.

* Height is from hearth to top of chimney and the minimum height is 10 feet.

** Chart shows minimum opening (sq. in.) for given height and input rate.
The control module is packaged under the burner at the manufacturer. Use caution to keep all the wire connections in place when removing the burner and module from the carton.

During appliance installation, place the control module on the pilot side of the burner, but not under the burner.

Insert 4 AA batteries into the control module. Follow the directions on pages 24 to 27 to sync the remote and control module.

After the appliance has been installed, slide the control module shield over the control module. Place the module in a location that is easy to reach so that the batteries can be changed.

The control module must remain on the fireplace floor or firebox bottom. This location will keep the batteries cool and result in a longer battery life.

**NOTICE:** Lava rock can be used to hide the control module and shield.
INSTALLING AS A VENTED APPLIANCE

**NOTICE:** (Damper Clamp Installation)
When installing your log set as a vented installation the damper clamp must be used.

![DAMPER CLAMP](image)

**Installing Damper Clamp**
Remove all ashes or other debris from the fireplace. If the fireplace is equipped with an ash dump be sure to seal the door with furnace cement or high temperature silicone. Be sure to check the damper for proper operation and verify that the flue passageway is open.

Place the clamp over the lip of the damper and tighten the hold down bolt until the clamp is securely attached to the damper. This will prevent the damper from accidentally closing.

Manual and millivolt controlled gas logs may be installed as a vented decorative log set in compliance with ANSI Z21.60 and National Fuel Gas Code. When the gas logs are operated with the damper open, non-combustible material and minimum mantel requirements do not apply.

![TYPICAL FIREPLACE](image)

When installing your log set as a vent-free installation the damper clamp can be used to eliminate the potential for odors when burning the logs for the first time.

MOUNTING INTO A FIREPLACE OR FIREBOX

- Turn off the gas supply to the fireplace or firebox.
- Seal any fresh air vents and/or ash clean-out doors located on the floor or wall of the fireplace. If left unsealed, drafting may cause pilot outage or sooting. Use a heat resistant sealant. Do not seal the chimney flue damper.

Before installing in a solid fuel burning fireplace, the chimney flue and firebox must be cleaned of soot, creosote, ashes and loose paint by a qualified chimney cleaner.

You must secure the gas log heater to the fireplace floor. If not, the entire unit may move when you adjust the controls. Movement of unit may cause shifting of the gas logs which leads to sooting and improper burning. Grate movement could cause a gas leak.

Special care is required if you are installing the unit into a sunken fireplace. You must raise the fireplace floor to allow access to gas log controls. This will insure adequate air flow and guard against sooting. Raise the fireplace floor using noncombustible materials.

Assembly Procedure:
1. Center the gas log unit in the fireplace or firebox. Make certain the front feet of the grate sit inside the front edge of the fireplace or firebox.
2. An anchor hole is provided in the two bottom side members of the grate frame. After centering the grate correctly, mark the hole positions on the fireplace/firebox floor. Drill three 5/32” diameter holes approximately 1-1/2” deep for masonry screws or three 1/8” holes for sheet metal screws.

![ANCHOR SCREWS](image)

**NOTICE:** Do not use the mounting hole underneath the pilot. Installing a screw there may damage the pilot.

3. Anchor the grate to the fireplace/firebox floor using the screws provided. Refer to Figure 12.

Proper installation of the grate is essential to prevent any movement of the gas logs and controls during operation.
Check all local codes for requirements, especially for the size and type of gas supply line required.

### Recommended Gas Pipe Diameter

<td></td>
<td></td>
</tr>
</tbody>
</table>

**NOTICE:** Never use plastic pipe. Check to confirm whether your local codes allow copper tubing or galvanized.

**NOTICE:** Since some municipalities have additional local codes, it is always best to consult your local authority and installation code.

### Installing a New Main Gas Shut-Off

Each appliance should have its own manual gas shut-off.

A manual main gas shut-off should be located in the vicinity of the unit. Where none exists, or where its size or location is not adequate, contact your local authorized installer for installation or relocation.

Compounds used on threaded joints of gas piping shall be resistant to the action of liquefied petroleum gases. The gas lines must be checked for leaks by the installer. This should be done with a soap solution watching for bubbles on all exposed connections, and if unexposed, a pressure test should be made.

**NOTICE:** Check inlet and outlet fittings on gas valve for leaks, but do not expose electronic components to the solution. Exposing them to the solution may damage the components.

**Never use an exposed flame to check for leaks.** Appliance must be disconnected from piping at inlet of control valve and pipe capped or plugged for pressure test. Never pressure test with appliance connected; control valve will sustain damage!

A gas valve and ground joint union should be installed in the gas line upstream of the gas control to aid in servicing. It is required by the National Fuel Gas Code that a drip line be installed near the gas inlet. This should consist of a vertical length of pipe tee connected into the gas line that is capped on the bottom in which condensation and foreign particles may collect.

### Pressure Testing of the Gas Supply System

1. To check the inlet pressure to the gas valve, a 1/8" (3.175mm) N.P.T. plugged tapping, accessible for test gauge connection, must be placed immediately upstream of the gas supply connection to the appliance.

2. The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa).

3. The appliance must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa).

**Attention!** If one of the procedures results in pressures in excess of 1/2 psig (14" w.c.) (3.5 kPa) on the appliance gas valve, it will result in a hazardous condition.
Over time, the rockwool will break down and new rockwool will need to be placed to recreate the original glowing embers effect. Remove all old rockwool from the appliance and apply new rock as described in this section or the log manual.

**NOTICE:** Only the rockwool supplied with this unit or ordered in accordance with the Parts List on pages 32 and 34 should be used on this burner. See the Parts List on pages 32 and 34 to order replacement rockwool.

**Placing Lava Rock in Front of Burner on Fireplace Floor**

Spread lava rocks on fireplace floor in front and sides of the burner pan. Lava rocks can be placed around the VFSUE control module. The lava rocks are for decorative effect and are not required for fireplace operation.

**ATTENTION:** Do not place lava rocks on burner, logs or rockwool. The lava rocks should only be placed on the fireplace floor.

---

**OPERATION INSTRUCTIONS/FLAME APPEARANCE**

Flames from the pilot (rear right back side of the pan burner) as well as the main flame should be visually checked as the log set is installed.

In normal operation at full rate after 10 to 15 minutes, the flame appearance should be sets of yellow flames.

**NOTICE:** All flames will be random by design, flame height will go up and down.

Glowing embers (rockwool) can cover the pan burner’s round ports in between the front and middle logs, but very little is necessary to cover this area. Excess ember material causes the yellow flame to become orange and stringy. Apply just enough to obtain slow glow and a gold yellow flame.

Avoid any drafts that alter burner flame patterns. Do not allow fans to blow directly into fireplace. Do not place a blower inside the burner area of the firebox. Ceiling fans may create drafts that alter flame patterns. Sooting and improper burning will result.

During manufacturing, fabricating and shipping, various components of this appliance are treated with certain oils, films or bonding agents. These chemicals are not harmful, but may produce annoying smoke and smells as they are burned off during the initial operation of the appliance, possibly causing headaches or eye or lung irritation. This is a normal and temporary occurrence.

The initial break-in operation should last 2-3 hours with the burner at the highest setting. Provide maximum ventilation by opening windows or doors to allow odors to dissipate. Any odors remaining after this initial break-in will be slight and will disappear with continued use.

---

**WARNING**

All previously applied rockwool must be removed prior to reapplication.

---

**Note For Burner Port Ignition:**

Due to the size of the burner, there may be a small delay before all burner ports ignite.
A. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

B. BEFORE LIGHTING, smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
- Do not try to light any appliance.
- Do not touch any electrical switch; Do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

---

1. STOP! Read the safety information above on this page.
2. Open bottom louver assembly (if applicable).
3. Set REMOTE/OFF/ON switch to "OFF".
4. Turn off all electric power to the appliance (if applicable).
5. Push in gas control knob slightly and turn clockwise to "OFF". NOTE: Knob cannot be turned from "PILOT" to "OFF" unless knob is pushed in slightly. Do not force.
6. Wait ten (10) minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, STOP! Follow "B" in the safety information above. If you do not smell gas, go to the next step.
7. Find pilot - Follow metal tube from gas control. The pilot is located next to the burner, near the right side.
8. Turn gas control knob counterclockwise to "PILOT".
9. Push in control knob all the way and hold in. Repeatedly push the Piezo Ignitor Button until the pilot is lit. Continue to hold the control knob in for about one (1) minute after the pilot is lit. Release knob, and it will pop back up. Pilot should remain lit. If it goes out, repeat steps 5 through 9.
   - If knob does not pop up when released, STOP and IMMEDIATELY call a qualified service technician or gas supplier.
   - If the pilot will not stay lit after several tries, turn the gas control knob to "OFF" and call your service technician or gas supplier.
10. Turn gas control knob counterclockwise to "ON".
11. Set REMOTE/OFF/ON switch to desired setting.
12. Turn on all electric power to the appliance (if applicable).
13. Close bottom louver assembly (if applicable).

---

1. Open bottom louver assembly (if applicable).
2. Set REMOTE/OFF/ON switch to OFF.
3. Turn off all electric power to the appliance if service is to be performed (if applicable).
4. Push in gas control knob slightly and turn clockwise to "OFF". Do not force.
5. Close bottom louver assembly (if applicable).
Thermostats are not approved on vented decorative appliances.

Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

The millivolt gas valve does not require 24 or 110 volts. The gas valve is powered by the thermopile. See Figure 15 to provide optional wall switch, thermostat, or remote control. Maximum length of 20 feet of 16 AWG to conductor wires is to be used with all optional switches.

Use the red and green leads from the rocker switch that are wire nutted together to attach optional components.

**Check System Operation**

Millivolt system and all individual components may be checked with a millivolt meter 0-1000 MV range.

**Remote Receiver -VFSUR-(18, 24, 30)**

Use the following steps to place the remote receiver adjacent to the gas valve.

**Attention:**
1. The remote receiver can not be placed behind the gas valve and burner assembly.
2. When facing the appliance, the remote receiver must be placed to the right of the gas valve and burner assembly.

**NOTICE:** Do not let remote control receiver come in contact with burner assembly.

On circulating vent-free firebox, install remote control receiver behind bottom louver.

Refer to remote control installation and operating instructions for more details on remote control.

### 750 Millivolt System

When you ignite the pilot, the thermocouple produces millivolts (electrical current) which energizes the magnet in the gas valve. After 30 seconds to 1 minute time period you can release the gas control knob and the pilot will stay ON. Allow your pilot flame to operate an additional one (1) to two (2) minutes before you turn the gas control knob from the PILOT position to the ON position. This time period allows the millivolts (electrical current) to buildup to a sufficient level allowing the gas control to operate properly.

**Millivolt Control**

The valve regulator controls the burner pressure which should be checked at the pressure test point. Turn captured screw counter clockwise 2 or 3 turns and then place tubing to pressure gauge over test point (Use test point “out” closest to control knob). After taking pressure reading, be sure and turn captured screw clockwise firmly to re-seal. Do not over torque. Check for gas leaks.
If the gas quality is bad, your pilot may not stay lit, the burners may produce soot and the heater may backfire when lit. If the gas quality or pressure is low, contact your local gas supplier immediately.

1. **When ignitor button is pressed, there is no spark at ODS/pilot.**
   a. Ignitor electrode positioned wrong - Replace pilot.
   b. Ignitor electrode is broken - Replace pilot.
   c. Ignitor electrode not connected to ignitor cable - Reconnect ignitor cable.
   d. Ignitor cable pinched or wet. Keep ignitor cable dry - Free ignitor cable if pinched by any metal or tubing.
   e. Broken ignitor cable - Replace ignitor cable.
   f. Bad piezo ignitor - Replace piezo ignitor.

2. **Appliance produces unwanted odors.**
   a. Appliance burning vapors from paint, hair spray, glues, etc. - Ventilate room. Stop using odor causing products while heater is running.
   b. Gas leak - Locate and correct all leaks.

3. **Appliance shuts off during use. (Pilot and main burner are off.)**
   a. Not enough fresh air is available for ODS/pilot to operate - Open window and/or door for ventilation.
   b. Low line pressure - Contact local gas company.
   c. ODS/pilot is partially clogged - Clean ODS/pilot.
   d. Defective thermocouple - Replace pilot.

4. **Appliance shuts off during use. (Pilot stays on.)**
   a. Low line pressure - Check line pressure to the valve.
   b. Defective thermopile - Check pilot flame, check wire connections, output should be a minimum of 325 millivolts across. TH/TP and TP terminals with ON/OFF/REMOTE switch off.

5. **Gas odor even when control knob is in OFF position.**
   a. Gas leak - Locate and correct all leaks.
   b. Control valve defective - Replace control valve.

6. **When ignitor button is pressed, there is spark at ODS/pilot, but no ignition.**
   a. Gas supply turned off or manual shutoff valve closed - Turn on gas supply or open manual shutoff valve.
   b. Control knob not in PILOT position - Turn control knob to PILOT position.
   c. Control knob not pressed in while in PILOT position - Press in control knob while in PILOT position.
   d. Air in gas lines when installed - Continue holding down control knob. Repeat igniting operation until air is removed.
   e. ODS/pilot is clogged - Replace ODS/pilot assembly or get it serviced.
   f. Gas regulator setting is not correct - Replace gas regulator.

7. **ODS/pilot lights but flame goes out when control knob is released.**
   a. Control knob not fully pressed in - Press in control knob fully.
   b. Control knob not pressed in long enough - After ODS/pilot lights, keep control knob pressed in 30 seconds.
   d. Thermocouple connection loose at control valve - Hand tighten until snug, then tighten 1/4 turn more.
   e. Pilot flame not touching thermocouple, which allows thermocouple to cool, causing pilot flame to go out. This problem could be caused by either low gas pressure or dirty or partially clogged ODS/pilot - Contact local gas company.
   f. Thermocouple damaged - Replace thermocouple.
   g. Control valve damaged - Replace control valve.

8. **Burner does not light after ODS/pilot is lit.**
   a. Burner orifice clogged - Clean burner or replace main burner orifice.
   b. Burner orifice diameter is too small - Replace burner orifice.
   c. Inlet gas pressure is too low - Contact qualified service person.

9. **If burning at main burner orifice occurs (a loud, roaring blow torch noise).**
   a. You must turn off burner assembly and contact a qualified service person.
   b. Manifold pressure is too low - Contact local gas company.
   c. Burner orifice clogged - Clean burner or replace burner orifice.

10. **Logs appear to smoke after initial operation.**
    a. Vapors from paint or curing process of logs - Problem will stop after a few hours of operation. Run the heater with the damper open if you have one, or open a window for the first few hours.
    b. Log heater is intended to be smokeless. Turn OFF heater and call qualified service person.

11. **Heater produces a whistling noise when main burner is lit.**
    a. Turning control knob to HIGH position when main burner is cold - Turn control knob to LOW position and let warm up for a minute.
    b. Air in gas line - Operate burner until air is removed from line. Have gas line checked by local gas company.
    c. Dirty or partially clogged burner orifice - Clean burner or replace burner orifice.

12. **No gas to pilot.**
    a. Propane-regulator shut down due to inlet pressure too high - Verify propane tank regulator is installed and set at 11” to 13” w.c. Replace regulator on heater.
FOR YOUR SAFETY READ BEFORE LIGHTING

A WARNING
If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
- Do not try to light any appliance.
- Do not touch any electrical switch.
- Do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

B. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

C. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

LIGHTING INSTRUCTIONS

1. STOP! Read the safety information above on this page.
2. Open bottom louver assembly, (if applicable).
3. Press the "I/O" (ON/OFF) button on the valve to face to "O" (OFF).
4. Wait five (5) minutes to clear out any gas, then smell for gas including near the floor. If you smell gas, STOP! Follow "A" in the safety information above. If you don't smell gas, go to the next step.

LIGHTING PROCEDURE - HANDSET METHOD
1. Turn control arrow on valve face to "ON." Press the "I/O" button to "I." Press the "OFF" and "UP" buttons on the handset firmly at the same time. A long "beep" will sound, followed by 5 short "beeps". Ignitor will spark and will continue until pilot is lit. For full Remote Control operation see appliance installation manual.

LIGHTING PROCEDURE - MANUAL METHOD
1. Press the "I/O" (ON/OFF) button to "I" for on.
2. Turn control arrow on valve face to "MAN" for manual.
3. Change the ignition cable from the receiver to the valve (Piezo Ignition tab).
4. Using a small bladed screwdriver, press & hold button within hole on control. Manually depress piezo igniter button to light the pilot. If pilot does not light, step 4 can be immediately repeated. If the pilot will not stay lit after several tries, follow the instructions "To Turn Off Gas to Appliance" and call your service technician or gas supplier.
5. When the pilot is lit and stable, turn the valve control knob counterclockwise to the "ON" position. Turn flame height control knob counterclockwise and the main burner will ignite. Turn flame height control knob to adjust flame height.

TO TURN OFF GAS TO THE APPLIANCE

MANUAL MODE - To turn off main burner, turn flame height control knob fully clockwise. To fully shut down, press "I/O" button to "O".

HANDSET MODE - Press "OFF" button on handset. To fully shut down, press "I/O" button to "O".
APPLICATION
GV60 is a battery-powered electronic and control system for gas appliances with pilot burners and ODS systems.

GENERAL NOTES
Radio Frequency Remote
433.92 MHz for Europe; 315 MHz for U.S. (FCC ID: RTD-G6R) and for Canada (IC: 4943A-G6R).

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Batteries - Remote Handset:
1 x 9V block (quality alkaline recommended)
Low battery indicator on handsets with display.
Handsets without display: the red LED gets darker.
Battery replacement is recommended after 2 years.

Batteries - Receiver:
4 x 1.5V “AA” (quality alkaline recommended)

NOTICE: An AC Mains Adapter may be used instead of batteries (only the Mertik Maxitrol or an AC Mains Adapter approved by Mertik Maxitrol can be used). See page 8.

NOTICE: During a power outage the AC Mains Adapter must be unplugged from the receiver to operate in the battery mode.
**WARNING**

Wiring of valve and receiver must be completed before starting ignition. Failure to do so could damage the electronics.

### SETTING THE ELECTRONICS CODE

**Notice:** The remote control and receiver are pre-programmed at the factory. However, if for some reason they do not communicate to each other, follow these steps to re-program.

#### Radio Frequency Remote

A code is selected automatically for all Mertik Maxitrol electronics from among 65,000 random codes available. The receiver has to learn the code of the handset:

- Press and hold the receiver's reset button (see figure 20) until you hear two beeps. After the second, longer beep, release the reset button.
- Within the subsequent 20 seconds press the \( \text{small flame} \) button on the handset until you hear two additional short beeps confirming the code is set. If you hear one long beep, this indicates the code learning sequence has failed or the wiring is incorrect.

**NOTICE:** This is a one time setting only, and is not required when changing the batteries in the remote or receiver.

#### Standard, Display, Timer/Thermostat RF Remote Handset

- Simultaneously press and hold the **OFF** and \( \text{large flame} \) buttons until a short beep confirms the start sequence has begun; release buttons.
- Continuing beeps confirm the ignition is in process.
- Once pilot ignition is confirmed, there is main gas flow.
- After main burner ignition the handset will automatically go into manual mode.

**Caution:** If the pilot does not stay lit after several tries, turn the main valve knob to **OFF** and follow the instructions "Turn Off Gas to Appliance".

#### TO TURN ON APPLIANCE

**WARNING**

When pilot ignition is confirmed, motor turns automatically to maximum flame height.

- Turn **MANUAL** knob to the **ON**, full counterclockwise position.
- Place **ON/OFF** switch (if equipped) in **ON** position.

#### TO TURN OFF APPLIANCE

Press **OFF** button on remote handset.

**Notice:** Press \( \text{small flame} \) to turn main gas to pilot gas.

### ADJUSTMENT - FLAME HEIGHT

#### Standard, Display, Timer/Thermostat RF Remote Handsets

- In standby mode: Press \( \text{large flame} \) to increase flame height.
- Press \( \text{small flame} \) to decrease flame height or to set appliance at pilot flame.
- For fine adjustment tap the large/small flames.

**Caution:** If the appliance will not operate, follow the instructions "TURN OFF GAS TO APPLIANCE".

#### Designated Low Fire and High Fire

- Double-click \( \text{small flame} \) button. "LO" will be displayed.
- Double-click \( \text{large flame} \) button. Flame automatically goes to high fire. "HI" will be displayed.

**Caution:** If the appliance will not operate, follow the instructions "TURN OFF GAS TO APPLIANCE".

### SETTING °C/24 HOUR OR °F/12 HOUR CLOCK

#### Display, Timer/Thermostat RF Remote Handsets

- Press **OFF** and \( \text{small flame} \) until display changes from Fahrenheit/12 hour clock to Celsius/24 hour clock and vice versa.
VFSUE REMOTE ELECTRONIC IGNITION AND CONTROL SYSTEM

SETTING THE TIME
Display, Timer/Thermostat RF Remote Handsets

- The display will flash after either:
  a. Installing the battery or
  b. Simultaneously pressing the \( \text{large flame} \) and \( \text{small flame} \)
- Press \( \text{large flame} \) to set the hour and the \( \text{small flame} \) to set the minute.
- Press \( \text{OFF} \) to return to manual mode or simply wait and it will automatically return to the manual mode.

CHANGING THE MODE OF OPERATION
Briefly pressing the SET button changes the mode of operation in the following order:

**Notice**: MANUAL mode can also be reached by pressing either the \( \text{large flame} \) or \( \text{small flame} \), and back to

\[
\text{MAN} \rightarrow \text{TEMP} \rightarrow \text{TIMER} \rightarrow \text{MAN}
\]

**MAN** Mode - Manual Flame Height Adjustment
- Press \( \text{large flame} \) to turn on the main burner.
- Press \( \text{large flame} \) to increase the flame height.
- Press \( \text{small flame} \) to decrease the flame height or to go to pilot standby position.

**Notice**: While pressing either button a symbol indicating transmission appears on the display. The receiver confirms transmission with a beep.

- **TEMP** - Daytime Temperature Mode
  (appliance must be in standby mode; pilot ignited): The room temperature is measured and compared to the set temperature. The flame height is then automatically adjusted to achieve the Daytime set temperature.

- **TEMP** - Nighttime Setback Temperature Mode
  (appliance must be in standby mode; pilot ignited): The room temperature is measured and compared to the Nighttime Setback temperature. The flame height is then automatically adjusted to achieve the Nighttime Setback temperature.

- **TIMER** - Timer Mode
  Setting P1 ON time
  - Hold the SET button until P1 \( \text{sun} \) is displayed and the time flashes.
  - Set the hour by pressing the \( \text{large flame} \) button.
  - Set the minutes by pressing the \( \text{small flame} \) button.

Setting P1 OFF time
- Briefly press SET button to scroll to setting P1 OFF time. P1 \( \text{moon} \) is displayed at the time flashes.
- Set the hour by pressing the \( \text{large flame} \) button.
- Set the minutes by pressing the \( \text{small flame} \) button.

SETTING THE TEMPERATURE
- Select either the \( \text{TEMP} \) MODE or the \( \text{TEMP} \) MODE by briefly pressing the SET button.
- Hold the SET button until the TEMP display flashes.
- Set the desired temperature with \( \text{large flame} \) or \( \text{small flame} \).
- Press OFF or simply wait to complete programming.

**Notice**: When the desired room temperature is SET on the hand held remote, the burner will automatically turn on when the room temperature drops 3 degrees Fahrenheit (F) below the SET temperature. The remote system will turn the burner off when the room temperature reaches 3 degrees Fahrenheit (F) above the SET temperature. The pilot will remain lit between burner cycles when using the thermostatic remote control feature.

Default Settings
- **Program 1**: P1 \( \text{after 6:00am} \) P1 \( \text{off after 8:00am} \)
- **Program 2**: P2 \( \text{after 11:50pm} \) P2 \( \text{off after 11:50pm} \)

- 2 ON times \( \times \) can be programmed per day (off times are indicated by the \( \text{off} \) symbol).
- The day starts at 12:00am, ends at 11:50pm
- The ON/OFF times have to be programmed in the order \( \text{Program 1 must start and end before Program 2. The start time must always be before the end time} \)
  - If P1 \( \leq \text{P1} \leq \text{P2} \) the timer is deactivated.
  - To have the fire over night, it can be set: P2 \( \text{after 11:50am and P1 after 12:00am} \)
  - Select Timer Mode by briefly pressing the SET button.

6 Hour no Communication Function
- Manual Mode/Thermostat/Timer Mode: The valve will turn to pilot flame if there is no change in flame height for a 6 hour period. In Temperature/Timer Mode, if the ambient room temperature changes, the flame height will adjust automatically to maintain set temperature, and the fire will continue to function normally. The valve will turn to pilot flame if the set temperature and the ambient room temperature remain the same over a 6 hour period.

Five Day Shut Off
- The system shuts off the fire completely if there is no change in the flame height for 5 days.

**NOTE**: Before the next ignition there is a 2 minute waiting period.

MANUAL OPERATION
Follow appliance lighting instructions for gaining access to the gas control and the pilot burner. Access to the pilot burner is only required for ignition with a match.

When turning main valve knob, do not force. Knob has a slip clutch that clicks until the end stops are reached. This allows for manual flame height adjustment as well as adjustment to pilot standby position.

1. **STOP!** Read the safety information included before proceeding.
2. Turn main valve knob to the **OFF**, full clockwise position.
3. Turn MANUAL knob to the **MAN**, full clockwise position.
4. Place ON/OFF switch (if equipped) in O (OFF position).
5. Wait five minutes to clear out any gas. Verify that no gas is in the area around the appliance, including near the floor. If you detect gas STOP! Follow "A" in the safety information. If no gas is present, proceed to step 6.
6. Place ON/OFF switch in ON position.
7. With the MANUAL knob in MAN position a manual pilot valve operator and piezo igniter are accessible.

**Ignition with match:**
Fully push down manual pilot valve operator and hold in, to start pilot gas flow.
Immediately light the pilot with a match, while continuing to hold in the manual pilot valve operator for about one minute after the pilot is lit. Release manual pilot valve operator. If pilot does not stay lit, wait five minutes and repeat.

**Ignition with piezo igniter:**
Change the ignition cable from the receiver to the valve. Use the push piezo igniter to ignite. If pilot does not stay lit, wait five minutes and repeat.
*Caution:* If the pilot does not stay lit after several tries, turn the gas control knob (main valve knob) to OFF and proceed to step 11.
8. If applicable, reinstall the top cover on the burner base before proceeding.
9. Turn MANUAL knob to the ON, full counterclockwise position.
10. Turn main valve knob to the full ON, full clockwise position.
11. If the appliance will not operate, follow the instructions "TURN OFF GAS TO APPLIANCE" and call the service technician or gas supplier.

**TURN OFF GAS TO APPLIANCE**
- Press OFF button on remote.
- Follow appliance instructions for gaining accessibility to the gas control.
- Place ON/OFF switch in O (off position).
- Turn main valve knob to the OFF full clockwise position.
- Replace appliance top cover.

**MISCELLANEOUS**

**Low Battery Indication**
*Receiver:* three short beeps will sound when motor turns
*Remote with display:* "BATT" will appear on display

*Notice:* Thermostatic Displays/Handsets: If the battery of the handset is low or if the transmitter is out of the communication range, the motor turns down the valve to pilot gas after 6 hours.

*Notice:* With very low battery the GV60 system shuts off the fire completely. This will not happen if the power supply is interrupted.

**Battery replacement**
Battery replacement is recommended at the beginning of each heating season. Do not use metal tools to remove batteries. Using a metal tool could cause a short that may damage the receiver.

**Location of Receiver**
When the RF-receiver is placed in the appliance, the surrounding metal can reduce reception considerably. The position of the antenna on the receiver also influences reception. It is recommended to straighten the antenna. The antenna must not come in contact or cross the ignition wire, this may render the receiver inoperable.

⚠️ **CAUTION:** Keep receiver free from debris and dirt. Protect the receiver with a plastic bag until all construction is complete.
If the gas quality is bad, your pilot may not stay lit, the burners may produce soot and the heater may backfire when lit. If the gas quality or pressure is low, contact your local gas supplier immediately.
Check the following items during installation prior to lighting the multisided burner:

- Check for correct air shutter.
  - **Natural Gas** - See Natural Gas air shutter table on page 5. Do not operate burner with incorrect air shutter.
  - **Propane Gas** - The air shutter setting must be Full Open for VFSU(R,E)(18,24,30).

**NOTICE**: Orifice shield removed for photo clarity.

- Check all carryover ports for blockage from the ceramic media
  - If there is blockage, use a small pointed tool to move the ceramic media away from the carryover port.

**BLOCKED CARRYOVER PORTS**

**UNBLOCKED CARRYOVER PORTS**

- For best results when lighting the burner, have the adjustable flame knob to the HI position, then adjust to a lower setting after the burner has ignited.

- When first lighting the pilot on the burner, it takes approximately 60 to 75 seconds to fully heat and energize the thermopile. Once the thermopile is energized, turn on the gas valve and light the burner.

**KNOB SET TO HI**

**KNOB SET TO LO**
Figure 25 shows a correct pilot flame pattern. The correct flame will be blue and will extend beyond the thermocouple. The flame will surround the thermocouple just below the tip. A slight yellow flame may occur where the pilot flame and main burner flame meet. Figure 26 shows an incorrect pilot flame pattern. The incorrect pilot flame is not touching the thermocouple. This will cause the thermocouple to cool. When the thermocouple cools, the heater will shut down.

**VFSU(R,E) PILOT FLAME PATTERN (VFSUE pilot will not have a thermopile)**

If pilot flame pattern is incorrect, as shown in Figure 26

**CLEANING AND MAINTENANCE/PILOT**

**Oxygen Depletion Sensor Pilot**

When the pilot has a large yellow tip flame, clean the Oxygen Depletion Sensor as follows:

1. Clean the ODS pilot by loosening nut B from the pilot tubing. When this procedure is required, grasp nut A with an open end wrench.
2. Blow air pressure through the holes indicated by the arrows. This will blow out foreign materials such as dust, lint and spider webs. Tighten nut B also by grasping nut A.

**WARNING**

Never use needles, wire or similar cylindrical objects to clean the pilot to avoid damaging the calibrated ruby that controls the gas flow.
Annual inspection and cleaning by your dealer or qualified service technician is recommended to prevent malfunction and/or sooting.

**TURN OFF HEATER AND ALLOW TO COOL BEFORE CLEANING.**
Remove logs, handling carefully by holding gently at each end. Gloves are recommended to prevent skin irritation from ceramic fibers. If skin becomes irritated, wash gently with soap and water. Refer to manual for correct log placement.

**PERIODIC CLEANING – Refer to parts diagram for location of items discussed below.**
- Do not use cleaning fluid to clean logs or any part of heater.
- Logs - brush with soft bristle brush or vacuum with brush attachment.
- Remove loose particles and dust from the burner areas, controls, piezo covers and grate. Don’t remove media from inside burner box.
- Inspect and clean burner air intake hole. Remove lint or particles with brush. Failure to keep air intake hole clean will result in sooting and poor combustion.

**ANNUAL CLEANING/INSPECTION – Refer to parts diagram for location of items discussed below.**
- Inspect and clean burner air intake hole. Remove lint or particles with vacuum or brush. Failure to keep air intake hole clean will result in sooting and poor combustion.
- Inspect and clean all burner ports.
- Inspect ODS pilot for operation and accumulation of lint at air intake holes.
- Verify flame pattern and log placement for proper operation.
- Verify smooth and responsive ignition of main burner.
- Check level of ceramic media in burner. Burner should be full, up to the level of openings in burner top.
- On VFSUE model, check battery life and replace if needed in both remote and receiver.
### VFSUR(18,24,30) PARTS LIST

Attention: When ordering parts, it is very important that part number and description of part coincide.

USE ONLY MANUFACTURER'S REPLACEMENT PARTS. USE OF ANY OTHER PARTS COULD CAUSE INJURY OR DEATH.
To Order Parts Under Warranty, please contact your local Empire dealer. See the dealer locator at www.empirecomfort.com. To provide warranty service, your dealer will need your name and address, purchase date and serial number, and the nature of the problem with the unit.

To Order Parts After the Warranty Period, please contact your dealer or one of the Master Parts Distributors listed below. This list changes from time to time. For the current list, please click on the Master Parts button at www.empirecomfort.com. Please note: Master Parts Distributors are independent businesses that stock the most commonly ordered Original Equipment repair parts for Heaters, Grills, and Fireplaces manufactured by Empire Comfort Systems Inc.

**HOW TO ORDER REPAIR PARTS**

**Parts Not Under Warranty**

Parts can be ordered through your Service Person, Dealer, or a Master Parts Distributor. See this page for the Master Parts Distributors list. For best results, the **service person or dealer** should order parts through the distributor. Parts can be shipped directly to the **service person/dealer**.

**Warranty Parts**

Warranty parts will need a proof of purchase and can be ordered by your Service Person or Dealer. Proof of purchase is **required** for warranty parts.

All parts listed in the Parts List have a Part Number. When ordering parts, first obtain the Model Number and Serial Number from the name plate on your equipment. Then determine the Part Number (**not** the Index Number) and the Description of each part from the following illustration and part list. Be sure to give all this information . . .

<table>
<thead>
<tr>
<th>Appliance Model Number</th>
<th>Part Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Appliance Serial Number</td>
<td>Part Number</td>
</tr>
</tbody>
</table>

Type of Gas (Propane or Natural)  

Do not order bolts, screws, washers or nuts. They are standard hardware items and can be purchased at any local hardware store.

Shipments contingent upon strikes, fires and all causes beyond our control.

WARRANTY TERMS

Empire Comfort Systems Inc. warranties this hearth product to be free from defects at the time of purchase and for the periods specified below. Hearth products must be installed by a qualified technician and must be maintained and operated safely, in accordance with the instructions in the owner’s manual. This warranty applies to the original purchaser only and is not transferable. All warranty repairs must be accomplished by a qualified gas appliance technician.

**Limited Five-Year Parts & Labor Warranty – All Other Components**
*Except Remote Controls, Thermostats, Accessories and Replacement Parts*

Should any part fail because of defective workmanship or material within five years from the date of purchase, Empire will repair or replace at Empire’s option. Within five years from the date of purchase, Empire will pay reasonable labor to have that defect repaired at Empire's option.

**Limited One-Year Parts Warranty – Remote Controls, Thermostats, Accessories, and Parts**

Should any remote control, thermostat, accessory, or other part fail because of defective workmanship within one year from the date of purchase, Empire will repair or replace at Empire’s option.

**Duties Of The Owner**

The appliance must be installed by a qualified installer and operated in accordance with the instructions furnished with the appliance. A bill of sale, cancelled check, or payment record should be kept to verify purchase date and establish warranty period. Ready access to the appliance for service.

**What Is Not Covered**

Damages that might result from the use, misuse, or improper installation of this appliance.

Travel, diagnostic costs and freight charges on warranted parts to and from the factory.

Claims that do not involve defective workmanship or materials.

Unauthorized service or parts replacements.

Removal and reinstallation cost.

Inoperable due to improper or lack of maintenance.

**How To Get Service**

To make a claim under this warranty, please have your receipt available and contact your installing dealer. Provide the dealer with the model number, serial number, type of gas, and purchase verification. The installing dealer is responsible for providing service and will contact the factory to initiate any warranted parts replacements. Empire will make replacement parts available at the factory. Shipping expenses are not covered.

If, after contacting your Empire dealer, service received has not been satisfactory, contact: Consumer Relations Department, Empire Comfort Systems Inc., PO Box 529, Belleville, Illinois 62222, or send an e-mail to info@empirecomfort.com with “Consumer Relations” in the subject line.

**Your Rights Under State Law**

This warranty gives your specific legal rights, and you may also have other rights, which vary from state to state.
